

Trinergy Welcomes Carlos Canessa

Oakbrook Terrace, IL
March 3, 2008

As Trinergy continues to explore and incorporate the latest technology into our solution, it is imperative we involve leading specialists well versed in the IT world. With that said Trinergy welcomes aboard Carlos Canessa, software engineer and Genexus software development expert.

Carlos comes from a background rich in IT and software development experience, having worked as an IT manager overseeing 80 employees for CODICEN (Education Department of Uruguay). There his role was to manage software that tracked the inventory and maintenance for all schools in Uruguay, a task that included overseeing 3,000 buildings, 25,000 PCs, and 7,000 printers.

Having made a name for himself in the IT world, Carlos moved to the United States in 2003 to work as a developer managing projects with ASIS, a federal government IT consultant firm in Washington, D.C. One of the primary reasons ASIS sought after Carlos was because of his skill and knowledge in the code generation software, Genexus. He first began learning Genexus in 1998 because he was, “sick and tired of writing code by hand!”

Trinergy utilizes this same code generation software and is eager to leverage his knowledge as we provide technology never introduced to the credit union and church fund marketplace. With his help we will continue to introduce novel components to our benchmark software.

Currently Carlos is juggling his responsibilities at Trinergy with moving his family to Chicago, which is no easy task! He and his wife, Gabriella, have a 13 year old daughter, Clementina. His hobbies include bike riding and following Formula 1 racing, but his main passion is golf. Carlos and his brother once teamed up to become the national golf champions in Uruguay, and he is currently a 5 handicap golfer, so a skins game with him is not recommended!

Please say hello and welcome Carlos next time you call our office!
